### **EXAMINER'S AMENDMENT**

Claims 5-6, 8-14, 16-18 and 23 are allowed.

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Barbara J. Tribble on January 10, 2005.

The application has been amended as follows:

A new abstract is set forth on page 3 of this paper.

**Amendment to the specification**

Replace the abstract with the abstract that follows.

**ABSTRACT**

A method of making a rheology modified aqueous composition, particularly useful for drilling, milling and mining applications, is disclosed. The method includes admixing, with a clay and water, a material or materials whose constituents substantially conform to the proportions of the empirical formula

$M'_m M''_n (OH)_{(2m+3n+qa+br)} (A^q)_a (B_r)_b \cdot xH_2O$ , where  $M'$  is a divalent metal cation,  $M''$  is a trivalent metal cation, A and B are anions, and a, b, m, n, q, r, and x are defined herein.

Calcined hydrotalcite and hydrotalcite-like materials are particularly preferred as starting materials. Optionally, an aluminum oxide, a nitrogen-containing compound, or both may be added. The resulting composition is preferably an elastic solid exhibiting stress-dependent fluidity, desirable temperature resistance, lubricity, inhibition of reactivity, relatively low cost, and pressure resistance. A dry composition and method of making are also disclosed.

The abstract completes the record with a corrected abstract to conform with 37 CFR 1.72 and MPEP 608.01(b).
